Value Education #6

- Ethical issues on AI was suggested by a student ~~of~~ as a topic of discussion.
- Will an AI-^{driven} ~~hit~~ car ~~hit~~ the ^{pedestrian} ~~person~~ in order to save the life of a driver?!
- Another similar question was posed by SJR which asks: Is it okay to leave prisoners in exchange for hostages?
- Manual Overwrite: Design principle in AI which says to let the user manually choose what decision to make after informing with sufficient information that the AI system will take.
- Is the person who is 'ignorant responsible' for his ignorance?
- The intention of refusing to know is what makes people responsible for mistakes.
- Is right to die/life conflicting or complementary?
